

## **Energy and Climate Change Policy**

Go North West (GNW) is committed to providing public transport services that meet our passengers' needs and expectations now and in the future. Public transport plays a key role in reducing the UK's carbon footprint by providing an alternative to the use of private cars and hence reducing the environmental impact of transport per capita.

GNW pledge to mitigate the negative impacts of our business energy use by operating our services and premises efficiently from a financial, technical and operational perspective. GNW drive continual improvement in our energy performance through innovation and working with our colleagues, industry partners, supply chain, stakeholders and interested parties to optimise our energy efficiency and encourage positive change in reducing climate change.

GNW will comply with all legislative, guidance and other requirements relating to energy sources, consumption. Efficiency and mitigation of climate change. GNW have established our baseline energy and carbon performance and set challenging targets and targets to improve it. GNW will ensure that adequate information and resources are provided to achieve our goals and GNW will monitor progress towards them, publicly reporting on our performance.

Working towards a culture where energy is seen as a valuable resource rather than just a cost of a business, GNW will support the purchase of cost-effective, energy efficient and zero or low carbon products and services such as electric vehicles, as well as design solutions that drive energy performance improvements.

This policy statement will be reviewed annually following Management review.
